

INSURED INSTITUTION PERFORMANCE

- **Quarterly Net Income of \$40.2 Billion Is 5.3 Percent Higher Than a Year Ago**
- **Net Interest Income Posts \$2 Billion Year-Over-Year Increase**
- **Lower Income From Mortgage Activities Contributes to \$3.6 Billion Drop in Noninterest Income**
- **Loan Growth Rises to Post-Crisis High**
- **Number of Banks on “Problem List” Falls Below 400**

Lower Expenses Contribute to Improvement in Earnings

The impact of the rise in medium- and long-term interest rates in second quarter 2013 remained evident in year-over-year earnings comparisons in second quarter 2014. The negative effect on noninterest income, particularly income from mortgage lending and from trading, was greater at large banks, while the positive implications of a steeper yield curve for net interest margins, combined with strengthening loan growth, were more significant for smaller institutions. The 6,656 FDIC-insured institutions filing financial results for second quarter 2014 reported combined net income of \$40.2 billion. This is \$2 billion (5.3 percent) more than the industry reported in second quarter 2013. Net operating revenue (the sum of net interest income and total noninterest income) was \$1.5 billion (0.9 percent) lower than in second quarter 2013, as a decline in noninterest income from mortgage sales, securitization, and servicing outweighed an increase in net interest income. Earnings benefited from lower expenses for loan-loss provisions, goodwill impairment, and payrolls.

A majority of banks—57.5 percent—reported year-over-year increases in quarterly earnings, and only 6.8 percent of banks were unprofitable, down from 8.4 percent a year ago. This is the lowest proportion of unprofitable institutions since first quarter 2006. The average return on assets for the quarter was 1.07 percent, slightly above the 1.06 percent average in the year-ago quarter.

Revenues Decline From Year-Ago Level for Fourth Consecutive Quarter

Net interest income posted the largest year-over-year increase in 14 quarters, rising by \$2 billion (1.9 percent), as interest-earning assets were 6.4 percent above year-ago levels. Almost 72 percent of all institutions reported year-over-year growth in quarterly net interest income. The average net interest margin fell to 3.15 percent from 3.25 percent in second quarter 2013. This is the lowest quarterly margin for the industry since third quarter 1989. Margin pressure was most evident at large banks. Nine of the ten largest banks reported lower quarterly margins than a year ago, whereas 55.2 percent of all banks reported year-over-year margin

Chart 1

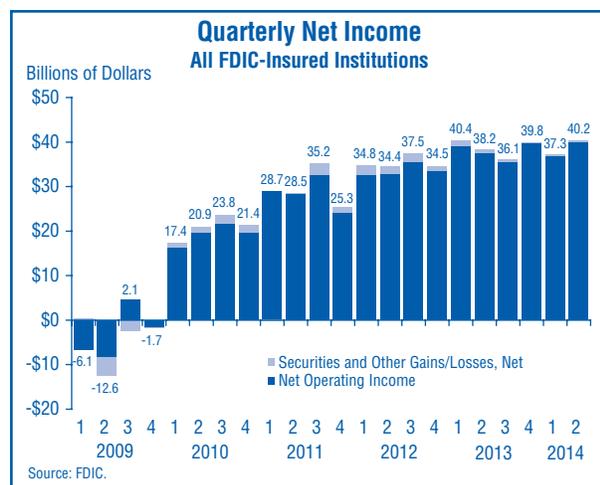

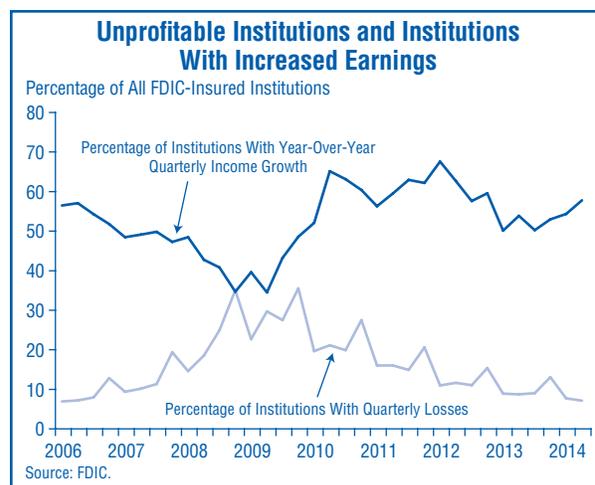

Chart 2

increases. Noninterest income was \$3.6 billion (5.3 percent) lower than a year earlier, as income from sales, securitization, and servicing of 1-to-4 family residential mortgages fell by \$3.7 billion (42.5 percent). Trading income declined for a fourth consecutive quarter, falling by \$721 million (10.1 percent). Reduced expenses outweighed the weakness in revenues compared with the year before. Banks set aside \$6.6 billion in provisions for loan and lease losses during the quarter, a \$1.9 billion (22.4 percent) decline from second quarter 2013 and the lowest quarterly provision total since second quarter 2006. Expenses for goodwill impairment totaled \$192 million, down from \$4.4 billion in second quarter 2013, when two institutions reported large impairment charges. Expenses for salaries and employee benefits were \$399 million (0.8 percent) lower as the industry reported 37,282 fewer employees than the year before. Itemized litigation expenses were \$2 billion higher than in second quarter 2013.

Charge-Offs Fall to Seven-Year Low

Loan losses declined year over year for a 16th consecutive quarter, falling to \$9.9 billion from \$14.1 billion in second quarter 2013. This is the lowest quarterly net charge-off total for the industry since second quarter 2007. The decline was led by 1-to-4 family residential mortgage loans, where net charge-offs fell by \$2.2 billion (74.7 percent). Net charge-offs were down year over year in all major loan categories except auto loans, where charge-offs increased \$31 million (10.4 percent). Slightly more than half of all banks—50.8 percent—reported lower quarterly net charge-offs than in second quarter 2013.

Noncurrent Loan Rate Falls to Six-Year Low

Noncurrent loan balances improved for a 17th consecutive quarter, falling by \$13.4 billion (6.9 percent) during the three months ended June 30. Noncurrent balances declined in all major loan categories except auto loans, where they increased by \$28 million (3.2 percent). The largest decline occurred in noncurrent 1-to-4 family residential mortgages, which fell by \$8 billion (6.4 percent). Noncurrent real estate loans secured by nonfarm nonresidential properties fell by \$1.9 billion (9.6 percent), and noncurrent real estate construction loans declined by \$1.2 billion (15.9 percent). At the end of the quarter, the industry's noncurrent loan rate was 2.24 percent, the lowest level since second quarter 2008.

Reserve Coverage of Noncurrent Loans Improves for Seventh Consecutive Quarter

Loan-loss reserves declined for a 17th consecutive quarter, as charge-offs removed more from reserves than banks added in provisions. Reserve balances fell by \$4.1 billion (3.1 percent) during the quarter, as net charge-offs exceeded loss provisions by \$3.3 billion. More than one-third of all banks (38.3 percent) reduced their loan-loss reserves. Despite the decline in reserves, the industry's coverage ratio of reserves to noncurrent loans and leases rose from 67.8 percent to 70.5 percent, thanks to the larger reduction in noncurrent loan balances. This is the seventh consecutive quarter that the coverage ratio has improved. The ratio is at its highest level since year-end 2008.

Chart 3

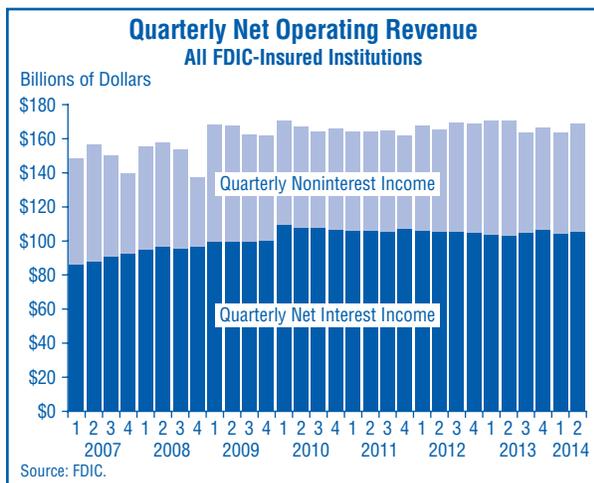

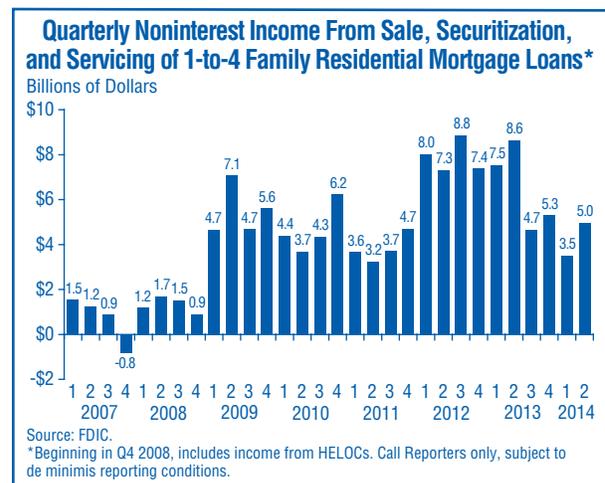

Chart 4

Rebound in Securities Values Bolsters Equity Growth

Equity capital rose by \$34.2 billion (2 percent) during the quarter. Retained earnings added \$17.6 billion to equity growth. Lower interest rates produced a \$20 billion increase in unrealized gains on available-for-sale securities, which also contributed to the growth in equity. In addition, goodwill increased by \$3.8 billion (1.3 percent). Tier 1 regulatory capital, unaffected by changes in unrealized securities gains and goodwill, increased by \$19.8 billion (1.4 percent). The average equity-to-assets ratio rose from 11.23 percent to 11.26 percent, the highest level in almost two years. The average Tier 1 leverage ratio rose from 9.54 percent to 9.57 percent, the highest level for this regulatory capital ratio since risk-based capital standards were enacted in 1991. Insured institutions declared \$22.6 billion in dividends in second quarter, up from \$20.9 billion in second quarter 2013. At the end of the quarter, 98.4 percent of all insured institutions, representing 99.8 percent of all insured institution assets, met or exceeded the requirements for the highest regulatory capital category as defined for Prompt Corrective Action purposes.

Increase in Loan Balances Is Largest Since 2007

Total assets increased by \$263.1 billion (1.8 percent), as loan and lease balances grew by \$178.5 billion (2.3

percent), investment securities portfolios rose by \$58.6 billion (1.9 percent), and balances at Federal Reserve banks increased by \$28.2 billion (2.3 percent). The growth in loan balances was the largest quarterly increase since fourth quarter 2007 (excluding a change in accounting rules in first quarter 2010). Loan growth was led by commercial and industrial loans (up \$49.9 billion, 3.1 percent), 1-to-4 family residential mortgages (up \$22.7 billion, 1.2 percent), credit card balances (up \$20 billion, 3 percent), and auto loans (up \$10.9 billion, 3 percent). All major loan categories posted increases during the quarter except home equity lines of credit (down \$4.4 billion, 0.9 percent). Loans to small businesses and farms rose by \$8.2 billion (1.3 percent), the largest quarterly increase since banks began reporting small-business loan data on a quarterly basis in 2010. Banks' holdings of available-for-sale securities increased by \$13.9 billion (0.6 percent), as a result of a \$20 billion increase in their market values; the book value of the industry's available-for-sale portfolio registered a slight \$6.1 billion decline. In contrast, banks increased their portfolios of held-to-maturity securities by \$44.7 billion (8.3 percent). Unfunded loan commitments increased by \$132.2 billion (2.1 percent), the largest quarterly increase since first quarter 2010. Growth in unfunded commitments was led by a \$44.5 billion (2.8 percent) increase in unfunded commercial and industrial loan commitments.

Chart 5

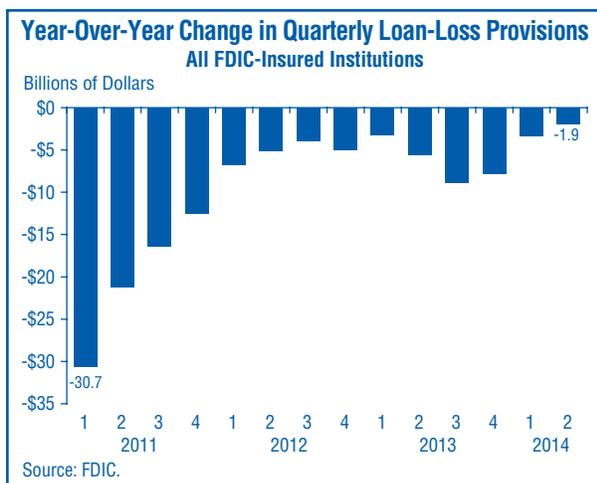

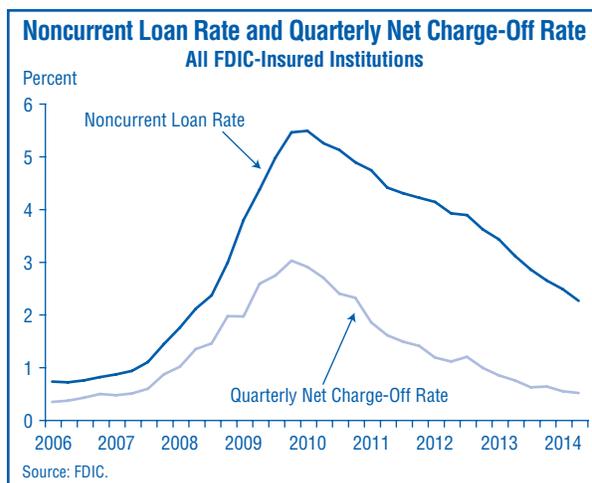

Chart 6

Large Denomination Noninterest-Bearing Deposits Post Strong Growth

Total deposits increased by \$172.4 billion (1.5 percent) in the quarter. Growth was led by balances in accounts larger than \$250,000, which increased by \$157.5 billion (3.2 percent). Balances in domestic deposit accounts of \$250,000 or less declined by \$13.5 billion (0.3 percent). Noninterest-bearing accounts in domestic offices were up \$115 billion (4.3 percent), while deposits in foreign offices rose by \$35.8 billion (2.6 percent). Nondeposit liabilities increased by \$56.5 billion (3 percent), as banks increased their borrowings from Federal Home Loan Banks by \$45.6 billion (11.6 percent). Almost 90 percent of the growth in FHLB advances consisted of short-term borrowings (maturing or repricing in one year or less). Banks also increased their unsecured nondeposit borrowings that mature in one to three years by \$17.5 billion (21.7 percent). Almost 90 percent of the \$228.9 billion increase in liabilities during the quarter consisted of liabilities maturing or repricing in one year or less.

“Problem List” Shrinks to Smallest Level in Over Five Years

The number of insured institutions filing quarterly financial reports declined from 6,730 to 6,656 in the second quarter. Mergers absorbed 61 institutions during the quarter, while seven institutions failed. No new charters were added in the quarter. The number of institutions on the FDIC’s “Problem List” declined from 411 to 354. This is the smallest number of “problem” institutions since the end of first quarter 2009, and is 60 percent below the most recent peak level of 888 “problem” institutions at the end of first quarter 2011. Total assets of “problem” institutions declined from \$126.1 billion to \$110.2 billion. The number of full-time equivalent employees at FDIC-insured institutions increased from 2,058,867 to 2,060,002, but remained below the year-earlier level of 2,097,284.

* Asset Concentration Group Definitions (Groups are hierarchical and mutually exclusive):

Credit-card Lenders - Institutions whose credit-card loans plus securitized receivables exceed 50 percent of total assets plus securitized receivables.

International Banks - Banks with assets greater than \$10 billion and more than 25 percent of total assets in foreign offices.

Agricultural Banks - Banks whose agricultural production loans plus real estate loans secured by farmland exceed 25 percent of the total loans and leases.

Commercial Lenders - Institutions whose commercial and industrial loans, plus real estate construction and development loans, plus loans secured by commercial real estate properties exceed 25 percent of total assets.

Mortgage Lenders - Institutions whose residential mortgage loans, plus mortgage-backed securities, exceed 50 percent of total assets.

Consumer Lenders - Institutions whose residential mortgage loans, plus credit-card loans, plus other loans to individuals, exceed 50 percent of total assets.

Other Specialized < \$1 Billion - Institutions with assets less than \$1 billion, whose loans and leases are less than 40 percent of total assets.

All Other < \$1 billion - Institutions with assets less than \$1 billion that do not meet any of the definitions above, they have significant lending activity with no identified asset concentrations.

All Other > \$1 billion - Institutions with assets greater than \$1 billion that do not meet any of the definitions above, they have significant lending activity with no identified asset concentrations.

** Noncurrent loan rates represent the percentage of loans in each category that are past due 90 days or more or that are in nonaccrual status.

COMMUNITY BANK PERFORMANCE

- **Net Income of \$4.9 Billion Is \$166 Million Above Year-Ago Level¹**
- **Higher Net Interest Income and Lower Loan-Loss Provisions Boost Earnings**
- **Net Interest Margin Increases From Previous Quarter and a Year Ago**
- **Loan Balances Increase, Outpacing Industry Growth**

Nearly 60 Percent of Community Banks Increase Earnings in Second Quarter

Improved net interest income and lower loan-loss provisions contributed to community banks' earnings of \$4.9 billion, up \$166 million (3.5 percent) from second quarter 2013. Well over half (58 percent) of all community banks reported higher earnings compared with the year-ago quarter, and those reporting a loss fell to 7 percent—the lowest level since second quarter 2006.

Net Interest Margin Is Nearly Half a Percentage Point Higher Than the Industry

Net interest income totaled \$16.8 billion for the quarter, up \$997 million (6.3 percent) from second quarter 2013. Almost three out of every four community banks (72 percent) reported a year-over-year increase. Similar to community banks, the industry improved net interest income from second quarter 2013, but at a lower rate. Community banks reported net interest margin (NIM)

of 3.61 percent, up 4 basis points from second quarter 2013, as average funding costs declined more rapidly than average asset yields. For the past five consecutive quarters, NIM widened between community banks and the industry, as community banks posted a NIM 46 basis points above the industry average. Nearly 80 percent of community banks reported NIM above the industry's 3.15 percent.

Lower Gains on Loan Sales and Higher Expenses Reduce Earnings

Noninterest income was \$4.5 billion in the second quarter, down \$475 million (9.5 percent) from second quarter 2013, as revenue from loan sales—including mortgage sales—declined by \$334 million (28.7 percent) from the year before. The industry experienced a lower rate decline (5 percent) in noninterest income, but similar to community banks, loan sales income declined. Noninterest expense at community banks was \$348 million (2.4 percent) higher than in second quarter 2013. About 62 percent of the increase in noninterest expense was accounted for by higher salary and employee benefits; however, average assets per employee rose to \$4.5 million from \$4.3 million one year earlier.

¹ Prior period dollar amounts used for comparisons are merger-adjusted, meaning the same institutions identified as community banks in the current quarter are used to determine dollar amounts in prior quarters, after taking acquisitions into account. Performance ratios are not merger-adjusted.

Chart 1

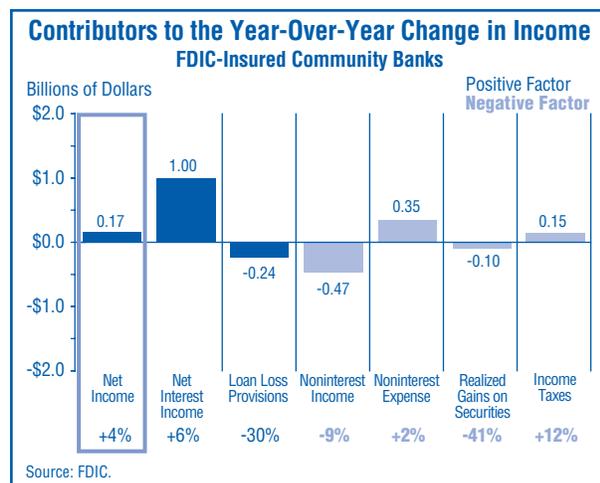

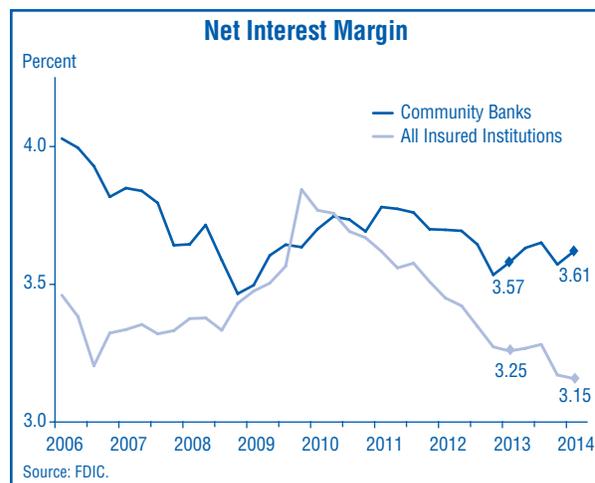

Chart 2

Loan Growth Increases From the Previous Quarter and a Year Ago

Loan balances totaled \$1.3 trillion in the second quarter, up \$37.7 billion (2.9 percent) from first quarter 2014. Community banks reported higher loan growth than the industry, which grew at 2.3 percent. All major loan categories increased from the previous quarter, led by 1-to-4 family (up \$9.2 billion, or 2.7 percent), commercial and industrial loans (up \$6.5 billion, or 3.7 percent), and nonfarm nonresidential loans (up \$6 billion, or 1.6 percent). Year-over-year loan growth at community banks (7.6 percent) outpaced the industry (4.9 percent). Close to 50 percent of the annual increase at community banks was accounted for by nonfarm nonresidential loans (up \$23.9 billion, or 6.5 percent) and commercial and industrial loans (up \$17.5 billion, or 10.5 percent). Total unused construction and development commitments increased by \$4 billion (7 percent) to \$61 billion, indicating stronger construction and development lending in future quarters.

Community Banks Continue to Support Small Loans to Businesses

Small loans to businesses—loans to commercial borrowers up to \$1 million, and farm loans up to \$500,000—totaled \$297.9 billion at community banks in the second quarter, up \$5 billion (1.7 percent) from the previous quarter and \$9 billion (3.1 percent) from second quarter 2013. Close to 62 percent of community banks increased small loans to businesses from the first quarter, led by agricultural production loans (up \$2.1 billion, or 9.1 percent) and commercial and industrial loans (\$1.7 billion, or 1.9 percent). As in community banks, the industry increased small loans to businesses from the year before, but at a slower rate (1.1 percent). Almost half (48

percent) of the year-over-year increase in small loans to businesses at community banks was driven by an increase in commercial and industrial loans. Community banks continued to hold 45 percent of small loans to businesses.

Noncurrent Loan Rate Declines to Pre-Crisis Level

Community banks reported the noncurrent rate of 1.54 percent in the second quarter, the lowest level since fourth quarter 2007. The noncurrent rate fell 14 basis points from the first quarter, 58 basis points from the previous year, and is 70 basis points below the industry rate of 2.24 percent. The noncurrent rate declined for all major loan categories from the first quarter. Although construction and development loans have the highest noncurrent rate (3.36 percent), that rate has declined for 15 consecutive quarters. The coverage ratio (loan loss reserves relative to noncurrent loans) for community banks improved from 91.09 percent to 96.08 percent during the quarter, and is well above the industry average of 70.54 percent. Despite a small decline in reserves during the quarter (\$172 million, or 0.9 percent), the coverage ratio has increased for 11 consecutive quarters.

Community Banks Decline From the Previous Quarter

The number of FDIC-insured community banks totaled 6,163 in the second quarter of 2014, down 71 from the first quarter. Seven community banks failed during the quarter, while 40 merged. Community banks continued to represent 93 percent of all insured institutions, with \$2 trillion in assets, \$1.7 trillion in deposits, and \$224 billion in equity capital.

** Noncurrent loan rates represent the percentage of loans in each category that are past due 90 days or more or that are in nonaccrual status.

INSURANCE FUND INDICATORS

- **Fund Balance Increases to \$51.1 Billion**
- **DIF Reserve Ratio Rises 4 Basis Points to 0.84 Percent**
- **Seven Institutions Fail During Second Quarter**

Total assets of the 6,656 FDIC-insured institutions increased by 1.8 percent (\$263.1 billion) during the second quarter.¹ Total deposits increased by 1.5 percent (\$172.4 billion). Domestic office deposits increased by 1.4 percent (\$136.6 billion), and foreign office deposits increased by 2.6 percent (\$35.8 billion). Domestic noninterest-bearing deposits increased by 4.3 percent (\$115 billion), while interest-bearing checking and savings accounts were nearly unchanged, decreasing by only 0.02 percent (\$1.1 billion) from the previous quarter. Domestic time deposits increased by 1.4 percent (\$22.6 billion). Over the past four quarters, total domestic deposits grew by 7.1 percent (\$663.2 billion), with interest-bearing deposits increasing by 5 percent (\$344.3 billion) and noninterest-bearing deposits rising by 13 percent (\$318.8 billion). Foreign deposits increased by 3.4 percent, other borrowed money increased by 14.8 percent (led by an increase in FHLB advances), and securities sold under agreements to repurchase declined by 18.7 percent over the same four-quarter period.²

Total estimated insured deposits decreased by 0.2 percent from the prior quarter and increased by 2.6 percent from one year earlier.³ For institutions existing at the start and the end of the second quarter, insured deposits increased during the quarter at 2,561 institutions (38 percent), decreased at 4,063 institutions (61 percent), and remained unchanged at 32 institutions.

The condition of the Deposit Insurance Fund (DIF) continues to improve. The DIF increased by \$2.2 billion during the second quarter to \$51.1 billion. Assessment income of \$2.2 billion was primarily responsible for the increase. Negative provisions for insurance losses of \$204 million, interest earned on investments of \$87 million, unrealized gains on available-for-sale securities of \$73 million, and other miscellaneous income of \$6 million also added to the fund. Operating expenses of \$428 million partially offset the fund balance increase. During the second quarter of 2014, 7 insured institutions with combined assets of \$853 million failed, at an estimated cost to the fund of \$112 million. The DIF's reserve ratio—the DIF fund balance as a percent of estimated insured deposits—was 0.84 percent as of the second quarter, up from 0.80 percent in the prior quarter and 0.64 percent one year earlier.

¹ Throughout the insurance fund discussion, FDIC-insured institutions include insured commercial banks and savings associations and, except where noted, exclude insured branches of foreign banks.

² Other borrowed money includes FHLB advances, term federal funds, mortgage indebtedness, and other borrowings.

³ Figures for estimated insured deposits in this discussion include insured branches of foreign banks, in addition to insured commercial banks and savings institutions.

Table 1

Distribution of the Assessment Base for FDIC-Insured Institutions* by Asset Size Data as of June 30, 2014				
Asset Size	Number of Institutions	Percent of Total Institutions	Assessment Base** (\$ Bil.)	Percent of Base
Less Than \$1 Billion	5,982	89.9	\$1,194.7	9.3
\$1 - \$10 Billion	565	8.5	1,320.7	10.3
\$10 - \$50 Billion	73	1.1	1,405.5	10.9
\$50 - \$100 Billion	12	0.2	789.0	6.1
Over \$100 Billion	24	0.4	8,147.5	63.4
Total	6,656	100.0	12,857.4	100.0

* Excludes insured U.S. branches of foreign banks.
** Average consolidated total assets minus average tangible equity, with adjustments for banker's banks and custodial banks.

Effective April 1, 2011, the deposit insurance assessment base changed to average consolidated total assets minus average tangible equity.⁴ Revisions to insurance assessment rates and risk-based pricing rules for large banks (banks with assets greater than \$10 billion) also became effective on that date.⁵ Table 1 shows the distribution of the assessment base by institution asset size category as of the second quarter of 2014.

Dodd-Frank requires that, for at least five years, the FDIC must make available to the public the reserve ratio and the Designated Reserve Ratio (DRR) using

both estimated insured deposits and the new assessment base. As of June 30, 2014, the FDIC reserve ratio would have been 0.40 percent using the new assessment base (compared to 0.84 percent using estimated insured deposits), and the 2 percent DRR using estimated insured deposits would have been 0.95 percent using the new assessment base.

Author: Kevin Brown, Senior Financial Analyst
Division of Insurance and Research
(202) 898-6817

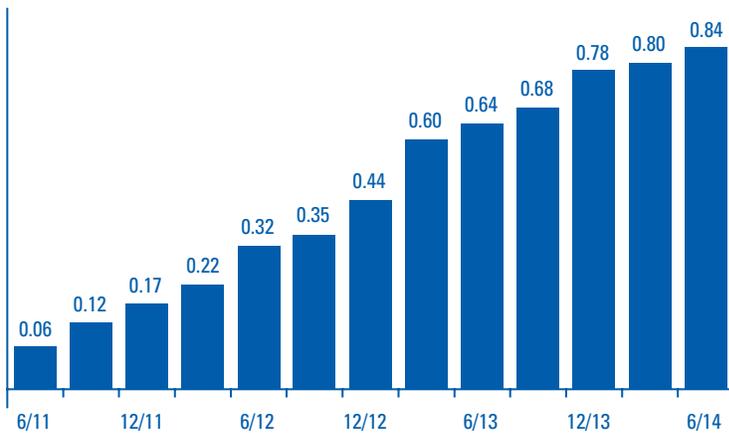

⁴ There is an additional adjustment to the assessment base for banker's banks and custodial banks, as permitted under Dodd-Frank.

⁵ The Fourth Quarter 2010 *Quarterly Banking Profile* includes a more detailed explanation of these changes.

Notes to Users

This publication contains financial data and other information for depository institutions insured by the Federal Deposit Insurance Corporation (FDIC). These notes are an integral part of this publication and provide information regarding the comparability of source data and reporting differences over time.

Tables I-A through VIII-A.

The information presented in Tables I-A through V-A of the *FDIC Quarterly Banking Profile* is aggregated for all FDIC-insured institutions, both commercial banks and savings institutions. Tables VI-A (Derivatives) and VII-A (Servicing, Securitization, and Asset Sales Activities) aggregate information only for insured commercial banks and state-chartered savings banks that file quarterly *Call Reports*. Table VIII-A (Trust Services) aggregates Trust asset and income information collected annually from all FDIC-insured institutions. Some tables are arrayed by groups of FDIC-insured institutions based on predominant types of asset concentration, while other tables aggregate institutions by asset size and geographic region. Quarterly and full-year data are provided for selected indicators, including aggregate condition and income data, performance ratios, condition ratios, and structural changes, as well as past due, noncurrent, and charge-off information for loans outstanding and other assets.

Tables I-B through VI-B.

The information presented in Tables I-B through VI-B is aggregated for all FDIC-insured commercial banks and savings institutions meeting the criteria for community banks that were developed for the FDIC's *Community Banking Study*, published in December, 2012: <http://fdic.gov/regulations/resources/cbi/report/cbi-full.pdf>.

The determination of which insured institutions are considered community banks is based on five steps.

The first step in defining a community bank is to aggregate all charter-level data reported under each holding company into a single banking organization. This aggregation applies both to balance-sheet measures and the number and location of banking offices. Under the FDIC definition, if the banking organization is designated as a community bank, every charter reporting under that organization is also considered a community bank when working with data at the charter level.

The second step is to exclude any banking organization where more than 50 percent of total assets are held in certain specialty banking charters, including: *credit card specialists*, *consumer nonbank banks*, *industrial loan companies*, *trust companies*, *bankers' banks*, and banks holding 10 percent or more of total assets in foreign offices.

Once the specialty organizations are removed, the third step involves including organizations that engage in basic banking activities as measured by the total loans-to-assets ratio (greater than 33 percent) and the ratio of core deposits to assets (greater than 50 percent). Core deposits are defined as non-brokered deposits in domestic offices. Analysis of the underlying data shows that these thresholds establish meaningful levels of basic lending and deposit gathering and still allow for a degree of diversity in how individual banks construct their balance sheets.

The fourth step includes organizations that operate within a limited geographic scope. This limitation of scope is used as a proxy measure for a bank's relationship approach to banking. Banks that operate within a limited market area have more ease in managing relationships at a personal level. Under this step, four criteria are applied to each banking organization. They include both a minimum and maximum number of total banking offices, a maximum level of deposits for any one office, and location-based criteria. The limits on the number of and deposits per office are gradually adjusted upward over time. For banking offices, banks must have more than one office, and the maximum number of offices starts at 40 in 1985 and reaches 75 in 2010. The maximum level of deposits for any one office is \$1.25 billion in deposits in 1985 and \$5 billion in deposits in 2010. The remaining geographic limitations are also based on maximums for the number of states (fixed at 3) and large metropolitan areas (fixed at 2) in which the organization maintains offices. Branch office data are based on the most recent data from the annual June 30 *Summary of Deposits Survey* that are available at the time of publication.

Finally, the definition establishes an *asset-size limit*, also adjusted upward over time from \$250 million in 1985 to \$1 billion in 2010, below which the limits on banking activities and geographic scope are waived. This final step acknowledges the fact that most of those small banks that are not excluded as specialty banks meet the requirements for banking activities and geographic limits in any event.

Summary of FDIC Research Definition of Community Banking Organizations

Community banks are designated at the level of the banking. (All charters under designated holding companies are considered community banking charters.)

Exclude: Any organization with:

- No loans or no core deposits
- Foreign Assets \geq 10% of total assets
- More than 50% of assets in certain specialty banks, including:
 - credit card specialists
 - consumer nonbank banks¹
 - industrial loan companies
 - trust companies
 - bankers' banks

Include: All remaining banking organizations with:

- Total assets < indexed size threshold²
- Total assets \geq indexed size threshold, where:
 - Loan to assets > 33%
 - Core deposits to assets > 50%
 - More than 1 office but no more than the indexed maximum number of offices.³

¹ Consumer nonbank banks are financial institutions with limited charters that can make commercial loans or take deposits, but not both.

² Asset size threshold indexed to equal \$250 million in 1985 and \$1 billion in 2010.

³ Maximum number of offices indexed to equal 40 in 1985 and 75 in 2010.

- Number of large MSAs with offices ≤ 2
- Number of states with offices ≤ 3
- No single office with deposits $>$ indexed maximum branch deposit size.⁴

Tables I-C through IV-C.

A separate set of tables (Tables I-C through IV-C) provides comparative quarterly data related to the Deposit Insurance Fund (DIF), problem institutions, failed/assisted institutions, estimated FDIC-insured deposits, as well as assessment rate information. Depository institutions that are not insured by the FDIC through the DIF are not included in the *FDIC Quarterly Banking Profile*. U.S. branches of institutions headquartered in foreign countries and non-deposit trust companies are not included unless otherwise indicated. Efforts are made to obtain financial reports for all active institutions. However, in some cases, final financial reports are not available for institutions that have closed or converted their charters.

DATA SOURCES

The financial information appearing in this publication is obtained primarily from the Federal Financial Institutions Examination Council (FFIEC) *Consolidated Reports of Condition and Income (Call Reports)* and the OTS *Thrift Financial Reports* submitted by all FDIC-insured depository institutions. (TFR filers began filing Call Reports effective with the quarter ending March 31, 2012.) This information is stored on and retrieved from the FDIC's Research Information System (RIS) database.

COMPUTATION METHODOLOGY

Parent institutions are required to file consolidated reports, while their subsidiary financial institutions are still required to file separate reports. Data from subsidiary institution reports are included in the *Quarterly Banking Profile* tables, which can lead to double-counting. No adjustments are made for any double-counting of subsidiary data. Additionally, certain adjustments are made to the OTS *Thrift Financial Reports* to provide closer conformance with the reporting and accounting requirements of the FFIEC *Call Reports*. (TFR filers began filing Call Reports effective with the quarter ending March 31, 2012.)

All asset and liability figures used in calculating performance ratios represent average amounts for the period (beginning-of-period amount plus end-of-period amount plus any interim periods, divided by the total number of periods). For "pooling-of-interest" mergers, the assets of the acquired institution(s) are included in average assets since the year-to-date income includes the results of all merged institutions. No adjustments are made for "purchase accounting" mergers. Growth rates represent the percentage change over a 12-month period in totals for institutions in the base period to totals for institutions in the current period. For the community bank subgroup, growth rates will reflect changes over time in the number and identities of institutions designated as community banks, as well as changes in the assets and liabilities, and income and expenses of group members. Unless indicated otherwise, growth rates are not adjusted for mergers or other changes in the composition of the community bank subgroup.

⁴ Maximum branch deposit size indexed to equal \$1.25 billion in 1985 and \$5 billion in 2010.

All data are collected and presented based on the location of each reporting institution's main office. Reported data may include assets and liabilities located outside of the reporting institution's home state. In addition, institutions may relocate across state lines or change their charters, resulting in an inter-regional or inter-industry migration, e.g., institutions can move their home offices between regions, and savings institutions can convert to commercial banks or commercial banks may convert to savings institutions.

ACCOUNTING CHANGES

Reclassification of Residential Real Estate Collateralized Consumer Mortgage Loans Upon Foreclosure

In January 2014, the FASB issued Accounting Standards Update (ASU) No. 2014-04, "Reclassification of Residential Real Estate Collateralized Consumer Mortgage Loans upon Foreclosure," to address diversity in practice for when certain loan receivables should be derecognized and the real estate collateral recognized. The ASU updated guidance contained in Accounting Standards Codification Subtopic 310-40, Receivables—Troubled Debt Restructurings by Creditors (formerly FASB Statement No.15, "Accounting by Debtors and Creditors for Troubled Debt Restructurings," as amended).

Under prior accounting guidance, all loan receivables were reclassified to other real estate owned (OREO) when the institution, as creditor, obtained physical possession of the property, regardless of whether formal foreclosure proceedings had taken place. The new ASU clarifies when a creditor is considered to have received physical possession (resulting from an in-substance repossession or foreclosure) of residential real estate collateralizing a consumer mortgage loan. Under the new guidance, physical possession for these residential real estate properties is considered to have occurred and a loan receivable would be reclassified to OREO only upon:

- The institution obtaining legal title upon completion of a foreclosure even if the borrower has redemption rights that provide the borrower with a legal right for a period of time after foreclosure to reclaim the property by paying certain amounts specified by law, or
- The completion of a deed in lieu of foreclosure or similar legal agreement under which the borrower conveys all interest in the residential real estate property to the institution to satisfy the loan.

Loans secured by real estate other than consumer mortgage loans collateralized by residential real estate should continue to be reclassified to OREO when the institution has received physical possession of a borrower's real estate, regardless of whether formal foreclosure proceedings take place.

For institutions that are public business entities, as defined under U.S. generally accepted accounting principles, ASU 2014-04 is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2014. For example, institutions with a calendar year fiscal year that are public business entities must apply the ASU in their Call Reports beginning March 31, 2015. However, institutions that are not public business entities are not required to apply the guidance in ASU 2014-04 until annual periods beginning after December 15, 2014, and interim periods within annual periods beginning after December 15, 2015. Thus, institutions with a calendar year fiscal year that are not public business entities must apply the ASU in their December 31, 2015, and

subsequent quarterly Call Reports. Earlier adoption of the guidance in ASU 2014-04 is permitted. Entities can elect to apply the ASU on either a modified retrospective transition basis or a prospective transition basis. Applying the ASU on a prospective transition basis should be less complex for institutions than applying the ASU on a modified retrospective transition basis. Under the prospective transition method, an institution should apply the new guidance to all instances where it receives physical possession of residential real estate property collateralizing consumer mortgage loans that occur after the date of adoption of the ASU. Under the modified retrospective transition method, an institution should apply a cumulative-effect adjustment to residential consumer mortgage loans and OREO existing as of the beginning of the annual period for which the ASU is effective. As a result of adopting the ASU on a modified retrospective basis, assets reclassified from OREO to loans should be measured at the carrying value of the real estate at the date of adoption while assets reclassified from loans to OREO should be measured at the lower of the net amount of the loan receivable or the OREO property's fair value less costs to sell at the time of adoption.

For additional information, institutions should refer to ASU 2014-04, which is available at <http://www.fasb.org/jsp/FASB/Page/SectionPage&cid=1176156316498>.

Indemnification Assets and Accounting Standards Update No. 2012-06 – In October 2012, the FASB issued Accounting Standards Update (ASU) No. 2012-06, “Subsequent Accounting for an Indemnification Asset Recognized at the Acquisition Date as a Result of a Government-Assisted Acquisition of a Financial Institution,” to address the subsequent measurement of an indemnification asset recognized in an acquisition of a financial institution that includes an FDIC loss-sharing agreement. This ASU amends ASC Topic 805, Business Combinations (formerly FASB Statement No. 141 (revised 2007), “Business Combinations”), which includes guidance applicable to FDIC-assisted acquisitions of failed institutions.

Under the ASU, when an institution experiences a change in the cash flows expected to be collected on an FDIC loss-sharing indemnification asset because of a change in the cash flows expected to be collected on the assets covered by the loss-sharing agreement, the institution should account for the change in the measurement of the indemnification asset on the same basis as the change in the assets subject to indemnification. Any amortization of changes in the value of the indemnification asset should be limited to the lesser of the term of the indemnification agreement and the remaining life of the indemnified assets.

The ASU is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2012. For institutions with a calendar year fiscal year, the ASU takes effect January 1, 2013. Early adoption of the ASU is permitted. The ASU's provisions should be applied prospectively to any new indemnification assets acquired after the date of adoption and to indemnification assets existing as of the date of adoption arising from an FDIC-assisted acquisition of a financial institution. Institutions with indemnification assets arising from FDIC loss-sharing agreements are expected to adopt ASU 2012-06 for Call Report purposes in accordance with the effective date of this standard. For additional information, refer to ASU 2012-06, available at <http://www.fasb.org/jsp/FASB/Page/SectionPage&cid=1176156316498>.

Goodwill Impairment Testing – In September 2011, the FASB issued Accounting Standards Update (ASU) No. 2011-08, “Testing Goodwill for Impairment,” to address concerns about the cost and complexity of the existing goodwill impairment test in ASC Topic 350, Intangibles-Goodwill and Other (formerly FASB Statement No. 142, “Goodwill and Other Intangible Assets”). The ASU's amendments to ASC Topic 350 are effective for annual and interim goodwill impairment tests performed for fiscal years beginning after December 15, 2011 (i.e., for annual or interim tests performed on or after January 1, 2012, for institutions with a calendar year fiscal year). Early adoption of the ASU was permitted. Under ASU 2011-08, an institution has the option of first assessing qualitative factors to determine whether it is necessary to perform the two-step quantitative goodwill impairment test described in ASC Topic 350. If, after considering all relevant events and circumstances, an institution determines it is unlikely (that is, a likelihood of 50 percent or less) that the fair value of a reporting unit is less than its carrying amount (including goodwill), then the institution does not need to perform the two-step goodwill impairment test. If the institution instead concludes that the opposite is true (that is, it is likely that the fair value of a reporting unit is less than its carrying amount), then it is required to perform the first step and, if necessary, the second step of the two-step goodwill impairment test. Under ASU 2011-08, an institution may choose to bypass the qualitative assessment for any reporting unit in any period and proceed directly to performing the first step of the two-step goodwill impairment test.

Extended Net Operating Loss Carryback Period – The Worker, Homeownership, and Business Assistance Act of 2009, which was enacted on November 6, 2009, permits banks and other businesses, excluding those banking organizations that received capital from the U.S. Treasury under the Troubled Asset Relief Program, to elect a net operating loss carryback period of three, four, or five years instead of the usual carryback period of two years for any one tax year ending after December 31, 2007, and beginning before January 1, 2010. For calendar-year banks, this extended carryback period applies to either the 2008 or 2009 tax year. The amount of the net operating loss that can be carried back to the fifth carryback year is limited to 50 percent of the available taxable income for that fifth year, but this limit does not apply to other carryback years.

Under generally accepted accounting principles, banks may not record the effects of this tax change in their balance sheets and income statements for financial and regulatory reporting purposes until the period in which the law was enacted, i.e., the fourth quarter of 2009. Therefore, banks should recognize the effects of this fourth quarter 2009 tax law change on their current and deferred tax assets and liabilities, including valuation allowances for deferred tax assets, in their *Call Reports* for December 31, 2009. Banks should not amend their *Call Reports* for prior quarters for the effects of the extended net operating loss carryback period.

The American Recovery and Reinvestment Act of 2009, which was enacted on February 17, 2009, permits qualifying small businesses, including FDIC-insured institutions, to elect a net operating loss carryback period of three, four, or five years instead of the usual carryback period of two years for any tax year ending in 2008 or, at the small business's election, any tax year beginning in 2008. Under generally

accepted accounting principles, institutions may not record the effect of this tax change in their balance sheets and income statements for financial and regulatory reporting purposes until the period in which the law was enacted, i.e., the first quarter of 2009.

Troubled Debt Restructurings and Current Market Interest Rates – Many institutions are restructuring or modifying the terms of loans to provide payment relief for those borrowers who have suffered deterioration in their financial condition. Such loan restructurings may include, but are not limited to, reductions in principal or accrued interest, reductions in interest rates, and extensions of the maturity date. Modifications may be executed at the original contractual interest rate on the loan, a current market interest rate, or a below-market interest rate. Many of these loan modifications meet the definition of a troubled debt restructuring (TDR).

The TDR accounting and reporting standards are set forth in ASC Subtopic 310-40, Receivables – Troubled Debt Restructurings by Creditors (formerly FASB Statement No. 15, “Accounting by Debtors and Creditors for Troubled Debt Restructurings,” as amended). This guidance specifies that a restructuring of a debt constitutes a TDR if, at the date of restructuring, the creditor for economic or legal reasons related to a debtor’s financial difficulties grants a concession to the debtor that it would not otherwise consider.

In the Call Report, until a loan that is a TDR is paid in full or otherwise settled, sold, or charged off, it must be reported in the appropriate loan category, as well as identified as a performing TDR loan, if it is in compliance with its modified terms. If a TDR is not in compliance with its modified terms, it is reported as a past-due and nonaccrual loan in the appropriate loan category, as well as distinguished from other past due and nonaccrual loans. To be considered in compliance with its modified terms, a loan that is a TDR must not be in nonaccrual status and must be current or less than 30 days past due on its contractual principal and interest payments under the modified repayment terms. A loan restructured in a TDR is an impaired loan. Thus, all TDRs must be measured for impairment in accordance with ASC Subtopic 310-10, Receivables – Overall (formerly FASB Statement No. 114, “Accounting by Creditors for Impairment of a Loan,” as amended), and the Call Report Glossary entry for “Loan Impairment.” Consistent with ASC Subtopic 310-10, TDRs may be aggregated and measured for impairment with other impaired loans that share common risk characteristics by using historical statistics, such as average recovery period and average amount recovered, along with a composite effective interest rate. The outcome of such an aggregation approach must be consistent with the impairment measurement methods prescribed in ASC Subtopic 310-10 and Call Report instructions for loans that are “individually” considered impaired instead of the measurement method prescribed in ASC Subtopic 450-20, Contingencies – Loss Contingencies (formerly FASB Statement No. 5, “Accounting for Contingencies”) for loans not individually considered impaired that are collectively evaluated for impairment. When a loan not previously considered individually impaired is restructured and determined to be a TDR, absent a partial charge-off, it generally is not appropriate for the impairment estimate on the loan to decline as a result of the change from the impairment measurement method prescribed in ASC Subtopic 450-20 to the methods prescribed in ASC Subtopic 310-10.

Troubled Debt Restructurings and Accounting Standards Update No. 2011-02 – In April 2011, the FASB issued Accounting Standards Update (ASU) No. 2011-02, “A Creditor’s Determination of Whether a Restructuring Is a Troubled Debt Restructuring,” to provide additional guidance to help creditors determine whether a concession has been granted to a borrower and whether a borrower is experiencing financial difficulties. The guidance is also intended to reduce diversity in practice in identifying and reporting TDRs. This ASU was effective for public companies for interim and annual periods beginning on or after June 15, 2011, and should have been applied retrospectively to the beginning of the annual period of adoption for purposes of identifying TDRs. The measurement of impairment for any newly identified TDRs resulting from retrospective application should have been applied prospectively in the first interim or annual period beginning on or after June 15, 2011. (For most public institutions, the ASU takes effect July 1, 2011, but retrospective application begins as of January 1, 2011.) Nonpublic companies should apply the new guidance for annual periods ending after December 15, 2012, including interim periods within those annual periods. (For most nonpublic institutions, the ASU took effect January 1, 2012.) Early adoption of the ASU was permitted for both public and nonpublic entities. Nonpublic entities that adopt early are subject to a retrospective identification requirement. For additional information, refer to ASU 2011-02, available at <http://www.fasb.org/jsp/FASB/Page/SectionPage&cid=1176156316498>.

Accounting for Loan Participations – Amended ASC Topic 860 (formerly FAS 166) modified the criteria that must be met in order for a transfer of a portion of a financial asset, such as a loan participation, to qualify for sale accounting. These changes apply to transfers of loan participations on or after the effective date of amended ASC Topic 860 (January 1, 2010, for banks with calendar year fiscal year), including advances under lines of credit that are transferred on or after the effective date of amended ASC Topic 860 even if the line of credit agreements were entered into before this effective date. Therefore, banks with a calendar-year fiscal year must account for transfers of loan participations on or after January 1, 2010, in accordance with amended ASC Topic 860. In general, loan participations transferred before the effective date of amended ASC Topic 860 are not affected by this new accounting standard.

Under amended ASC Topic 860, if a transfer of a portion of an entire financial asset meets the definition of a “participating interest,” then the transferor (normally the lead lender) must evaluate whether the transfer meets all of the conditions in this accounting standard to qualify for sale accounting.

Other-Than-Temporary Impairment – When the fair value of an investment in an individual available-for-sale or held-to-maturity security is less than its cost basis, the impairment is either temporary or other-than-temporary. The amount of the total other-than-temporary impairment related to credit loss must be recognized in earnings, but the amount of total impairment related to other factors must be recognized in other comprehensive income, net of applicable taxes. To determine whether the impairment is other-than-temporary, an institution must apply the applicable accounting guidance – refer to previously published *Quarterly Banking Profile* notes: <http://www2.fdic.gov/qbp/2011mar/qbpnot.html>.

ASC Topics 860 & 810 (formerly FASB Statements 166 & 167) – In June 2009, the FASB issued Statement No. 166, Accounting for Transfers of Financial Assets (FAS 166), and Statement No. 167, Amendments to FASB Interpretation No. 46(R) (FAS 167), which change the way entities account for securitizations and special purpose entities. FAS 166 revised FASB Statement No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, by eliminating the concept of a “qualifying special-purpose entity,” creating the concept of a “participating interest,” changing the requirements for derecognizing financial assets, and requiring additional disclosures. FAS 167 revised FASB Interpretation No. 46(R), Consolidation of Variable Interest Entities, by changing how a bank or other company determines when an entity that is insufficiently capitalized or is not controlled through voting or similar rights, i.e., a “variable interest entity” (VIE), should be consolidated. Under FAS 167, a bank must perform a qualitative assessment to determine whether its variable interest or interests give it a controlling financial interest in a VIE. If a bank’s variable interest or interests provide it with the power to direct the most significant activities of the VIE, and the right to receive benefits or the obligation to absorb losses that could potentially be significant to the VIE, the bank is the primary beneficiary of, and therefore must consolidate, the VIE.

Both FAS 166 and FAS 167 take effect as of the beginning of each bank’s first annual reporting period that begins after November 15, 2009, for interim periods therein, and for interim and annual reporting periods thereafter (i.e., as of January 1, 2010, for banks with a calendar year fiscal year). Earlier application is prohibited. Banks are expected to adopt FAS 166 and FAS 167 for Call Report purposes in accordance with the effective date of these two standards. Also, FAS 166 has modified the criteria that must be met in order for a transfer of a portion of a financial asset, such as a loan participation, to qualify for sale accounting. These changes apply to transfers of loan participations on or after the effective date of FAS 166. Therefore, banks with a calendar year fiscal year must account for transfers of loan participations on or after January 1, 2010, in accordance with FAS 166. In general, loan participations transferred before the effective date of FAS 166 (January 1, 2010, for calendar year banks) are not affected by this new accounting standard and pre-FAS 166 participations that were properly accounted for as sales under FASB Statement No. 140 will continue to be reported as having been sold.

Accounting Standards Codification – refer to previously published *Quarterly Banking Profile* notes: <http://www2.fdic.gov/qbp/2011sep/qbpnot.html>.

DEFINITIONS (in alphabetical order)

All other assets – total cash, balances due from depository institutions, premises, fixed assets, direct investments in real estate, investment in unconsolidated subsidiaries, customers’ liability on acceptances outstanding, assets held in trading accounts, federal funds sold, securities purchased with agreements to resell, fair market value of derivatives, prepaid deposit insurance assessments, and other assets.

All other liabilities – bank’s liability on acceptances, limited-life preferred stock, allowance for estimated off-balance-sheet credit losses, fair market value of derivatives, and other liabilities.

Assessment base – effective April 1, 2011, the deposit insurance assessment base has changed to “average consolidated total assets minus average tangible equity” with an additional adjustment to the assessment base for banker’s banks and custodial banks, as permitted under Dodd-Frank. Previously the assessment base was “assessable deposits” and consisted of DIF deposits (deposits insured by the FDIC Deposit Insurance Fund) in banks’ domestic offices with certain adjustments.

Assets securitized and sold – total outstanding principal balance of assets securitized and sold with servicing retained or other seller-provided credit enhancements.

Capital Purchase Program (CPP) – as announced in October 2008 under the TARP, the Treasury Department purchase of noncumulative perpetual preferred stock and related warrants that is treated as Tier 1 capital for regulatory capital purposes is included in “Total equity capital.” Such warrants to purchase common stock or noncumulative preferred stock issued by publicly-traded banks are reflected as well in “Surplus.” Warrants to purchase common stock or noncumulative preferred stock of not-publicly-traded bank stock are classified in a bank’s balance sheet as “Other liabilities.”

Construction and development loans – includes loans for all property types under construction, as well as loans for land acquisition and development.

Core capital – common equity capital plus noncumulative perpetual preferred stock plus minority interest in consolidated subsidiaries, less goodwill and other ineligible intangible assets. The amount of eligible intangibles (including servicing rights) included in core capital is limited in accordance with supervisory capital regulations.

Cost of funding earning assets – total interest expense paid on deposits and other borrowed money as a percentage of average earning assets.

Credit enhancements – techniques whereby a company attempts to reduce the credit risk of its obligations. Credit enhancement may be provided by a third party (external credit enhancement) or by the originator (internal credit enhancement), and more than one type of enhancement may be associated with a given issuance.

Deposit Insurance Fund (DIF) – the Bank (BIF) and Savings Association (SAIF) Insurance Funds were merged in 2006 by the Federal Deposit Insurance Reform Act to form the DIF.

Derivatives notional amount – the notional, or contractual, amounts of derivatives represent the level of involvement in the types of derivatives transactions and are not a quantification of market risk or credit risk. Notional amounts represent the amounts used to calculate contractual cash flows to be exchanged.

Derivatives credit equivalent amount – the fair value of the derivative plus an additional amount for potential future credit exposure based on the notional amount, the remaining maturity and type of the contract.

Derivatives transaction types:

Futures and forward contracts – contracts in which the buyer agrees to purchase and the seller agrees to sell, at a specified future date, a specific quantity of an underlying variable or index at a specified price or yield. These contracts exist for a variety of variables or indices, (traditional agricultural or physical commodities, as well as currencies and interest rates). Futures contracts are standardized and are

traded on organized exchanges which set limits on counterparty credit exposure. Forward contracts do not have standardized terms and are traded over the counter.

Option contracts – contracts in which the buyer acquires the right to buy from or sell to another party some specified amount of an underlying variable or index at a stated price (strike price) during a period or on a specified future date, in return for compensation (such as a fee or premium). The seller is obligated to purchase or sell the variable or index at the discretion of the buyer of the contract.

Swaps – obligations between two parties to exchange a series of cash flows at periodic intervals (settlement dates), for a specified period. The cash flows of a swap are either fixed, or determined for each settlement date by multiplying the quantity (notional principal) of the underlying variable or index by specified reference rates or prices. Except for currency swaps, the notional principal is used to calculate each payment but is not exchanged.

Derivatives underlying risk exposure – the potential exposure characterized by the level of banks' concentration in particular underlying instruments, in general. Exposure can result from market risk, credit risk, and operational risk, as well as, interest rate risk.

Domestic deposits to total assets – total domestic office deposits as a percent of total assets on a consolidated basis.

Earning assets – all loans and other investments that earn interest or dividend income.

Efficiency ratio – Noninterest expense less amortization of intangible assets as a percent of net interest income plus non-interest income. This ratio measures the proportion of net operating revenues that are absorbed by overhead expenses, so that a lower value indicates greater efficiency.

Estimated insured deposits – in general, insured deposits are total domestic deposits minus estimated uninsured deposits. Beginning March 31, 2008, for institutions that file Call Reports, insured deposits are total assessable deposits minus estimated uninsured deposits. Beginning September 30, 2009, insured deposits include deposits in accounts of \$100,000 to \$250,000 that are covered by a temporary increase in the FDIC's standard maximum deposit insurance amount (SMDIA). The Dodd-Frank Wall Street Reform and Consumer Protection Act enacted on July 21, 2010, made permanent the standard maximum deposit insurance amount (SMDIA) of \$250,000. Also, the Dodd-Frank Act amended the Federal Deposit Insurance Act to include noninterest-bearing transaction accounts as a new temporary deposit insurance account category. All funds held in noninterest-bearing transaction accounts were fully insured, without limit, from December 31, 2010, through December 31, 2012.

Failed/assisted institutions – an institution fails when regulators take control of the institution, placing the assets and liabilities into a bridge bank, conservatorship, receivership, or another healthy institution. This action may require the FDIC to provide funds to cover losses. An institution is defined as "assisted" when the institution remains open and receives assistance in order to continue operating.

Fair Value – the valuation of various assets and liabilities on the balance sheet—including trading assets and liabilities, available-for-sale securities, loans held for sale, assets and liabilities accounted for under the fair value option, and fore-

closed assets—involves the use of fair values. During periods of market stress, the fair values of some financial instruments and nonfinancial assets may decline.

FHLB advances – all borrowings by FDIC insured institutions from the Federal Home Loan Bank System (FHLB), as reported by Call Report filers, and by TFR filers prior to March 31, 2012.

Goodwill and other intangibles – intangible assets include servicing rights, purchased credit card relationships, and other identifiable intangible assets. Goodwill is the excess of the purchase price over the fair market value of the net assets acquired, less subsequent impairment adjustments. Other intangible assets are recorded at fair value, less subsequent quarterly amortization and impairment adjustments.

Loans secured by real estate – includes home equity loans, junior liens secured by 1-4 family residential properties, and all other loans secured by real estate.

Loans to individuals – includes outstanding credit card balances and other secured and unsecured consumer loans.

Long-term assets (5+ years) – loans and debt securities with remaining maturities or repricing intervals of over five years.

Maximum credit exposure – the maximum contractual credit exposure remaining under recourse arrangements and other seller-provided credit enhancements provided by the reporting bank to securitizations.

Mortgage-backed securities – certificates of participation in pools of residential mortgages and collateralized mortgage obligations issued or guaranteed by government-sponsored or private enterprises. Also, see "Securities," below.

Net charge-offs – total loans and leases charged off (removed from balance sheet because of uncollectibility), less amounts recovered on loans and leases previously charged off.

Net interest margin – the difference between interest and dividends earned on interest-bearing assets and interest paid to depositors and other creditors, expressed as a percentage of average earning assets. No adjustments are made for interest income that is tax exempt.

Net loans to total assets – loans and lease financing receivables, net of unearned income, allowance and reserves, as a percent of total assets on a consolidated basis.

Net operating income – income excluding discretionary transactions such as gains (or losses) on the sale of investment securities and extraordinary items. Income taxes subtracted from operating income have been adjusted to exclude the portion applicable to securities gains (or losses).

Noncurrent assets – the sum of loans, leases, debt securities, and other assets that are 90 days or more past due, or in non-accrual status.

Noncurrent loans & leases – the sum of loans and leases 90 days or more past due, and loans and leases in nonaccrual status.

Number of institutions reporting – the number of institutions that actually filed a financial report.

New reporters – insured institutions filing quarterly financial reports for the first time.

Other borrowed funds – federal funds purchased, securities sold with agreements to repurchase, demand notes issued to the U.S. Treasury, FHLB advances, other borrowed money, mortgage indebtedness, obligations under capitalized leases and

trading liabilities, less revaluation losses on assets held in trading accounts.

Other real estate owned – primarily foreclosed property. Direct and indirect investments in real estate ventures are excluded. The amount is reflected net of valuation allowances. For institutions that file a *Thrift Financial Report* (TFR), the valuation allowance subtracted also includes allowances for other repossessed assets. Also, for TFR filers the components of other real estate owned are reported gross of valuation allowances. (TFR filers began filing Call Reports effective with the quarter ending March 31, 2012.)

Percent of institutions with earnings gains – the percent of institutions that increased their net income (or decreased their losses) compared to the same period a year earlier.

“Problem” institutions – federal regulators assign a composite rating to each financial institution, based upon an evaluation of financial and operational criteria. The rating is based on a scale of 1 to 5 in ascending order of supervisory concern. “Problem” institutions are those institutions with financial, operational, or managerial weaknesses that threaten their continued financial viability. Depending upon the degree of risk and supervisory concern, they are rated either a “4” or “5.” The number and assets of “problem” institutions are based on FDIC composite ratings. Prior to March 31, 2008, for institutions whose primary federal regulator was the OTS, the OTS composite rating was used.

Recourse – an arrangement in which a bank retains, in form or in substance, any credit risk directly or indirectly associated with an asset it has sold (in accordance with generally accepted accounting principles) that exceeds a pro rata share of the bank’s claim on the asset. If a bank has no claim on an asset it has sold, then the retention of any credit risk is recourse.

Reserves for losses – the allowance for loan and lease losses on a consolidated basis.

Restructured loans and leases – loan and lease financing receivables with terms restructured from the original contract. Excludes restructured loans and leases that are not in compliance with the modified terms.

Retained earnings – net income less cash dividends on common and preferred stock for the reporting period.

Return on assets – bank net income (including gains or losses on securities and extraordinary items) as a percentage of average total (consolidated) assets. The basic yardstick of bank profitability.

Return on equity – bank net income (including gains or losses on securities and extraordinary items) as a percentage of average total equity capital.

Risk-based capital groups – definition:

(Percent)	Total Risk-Based Capital*		Tier 1 Risk-Based Capital*		Tier 1 Leverage		Tangible Equity
Well-capitalized	≥10	and	≥6	and	≥5		–
Adequately capitalized	≥8	and	≥4	and	≥4		–
Undercapitalized	≥6	and	≥3	and	≥3		–
Significantly undercapitalized	<6	or	<3	or	<3	and	>2
Critically undercapitalized	–		–		–		≤2

* As a percentage of risk-weighted assets.

Risk Categories and Assessment Rate Schedule – The current risk categories became effective January 1, 2007. Capital ratios and supervisory ratings distinguish one risk category from another. Effective April 1, 2011, risk categories for large institutions (generally those with at least \$10 billion in assets) were eliminated. The following table shows the relationship of risk categories (I, II, III, IV) for small institutions to capital and supervisory groups as well as the initial base assessment rates (in basis points) for each risk category. Supervisory Group A generally includes institutions with CAMELS composite ratings of 1 or 2; Supervisory Group B generally includes institutions with a CAMELS composite rating of 3; and Supervisory Group C generally includes institutions with CAMELS composite ratings of 4 or 5. For purposes of risk-based assessment capital groups, undercapitalized includes institutions that are significantly or critically undercapitalized.

Capital Category	Supervisory Group		
	A	B	C
1. Well Capitalized	I 5–9 bps	II 14 bps	III 23 bps
2. Adequately Capitalized	II 14 bps		
3. Undercapitalized		III 23 bps	IV 35 bps

Effective April 1, 2011, the initial base assessment rates are 5 to 35 basis points. An institution’s total assessment rate may be less than or greater than its initial base assessment rate as a result of additional risk adjustments.

The base assessment rates for small institutions in Risk Category I are based on a combination of financial ratios and CAMELS component ratings (the financial ratios method).

As required by Dodd-Frank, the calculation of risk-based assessment rates for large institutions no longer relies on long-term debt issuer ratings. Rates for large institutions are based on CAMELS ratings and certain forward-looking financial measures combined into two scorecards—one for most large institutions and another for the remaining very large institutions that are structurally and operationally complex or that pose unique challenges and risks in case of failure (highly complex institutions). In general, a highly complex institution is an institution (other than a credit card bank) with more than \$500 billion in total assets that is controlled by a parent or intermediate parent company with more than \$500 billion in total assets or a processing bank or trust company with total fiduciary assets of \$500 billion or more. The FDIC retains its ability to take additional information into account to make a limited adjustment to an institution’s total score (the large bank adjustment), which will be used to determine an institution’s initial base assessment rate.

Effective April 1, 2011, the three possible adjustments to an institution’s initial base assessment rate are as follows: (1) **Unsecured Debt Adjustment**: An institution’s rate may decrease by up to 5 basis points for unsecured debt. The unsecured debt adjustment cannot exceed the lesser of 5 basis points or 50 percent of an institution’s initial base assessment rate (IBAR). Thus, for example, an institution with an IBAR of 5 basis points would have a maximum unsecured debt

adjustment of 2.5 basis points and could not have a total base assessment rate lower than 2.5 basis points. (2) **Depository Institution Debt Adjustment:** For institutions that hold long-term unsecured debt issued by another insured depository institution, a 50 basis point charge is applied to the amount of such debt held in excess of 3 percent of an institution's Tier 1 capital. (3) **Brokered Deposit Adjustment:** Rates for small institutions that are not in Risk Category I and for large institutions that are not well capitalized or do not have a composite CAMELS rating of 1 or 2 may increase (not to exceed 10 basis points) if their brokered deposits exceed 10 percent of domestic deposits. After applying all possible adjustments (excluding the Depository Institution Debt Adjustment), minimum and maximum total base assessment rates for each risk category are as follows:

Total Base Assessment Rates*					
	Risk Category I	Risk Category II	Risk Category III	Risk Category IV	Large and Highly Complex Institutions
Initial base assessment rate	5-9	14	23	35	5-35
Unsecured debt adjustment	-4.5-0	-5-0	-5-0	-5-0	-5-0
Brokered deposit adjustment	—	0-10	0-10	0-10	0-10
Total Base Assessment rate	2.5-9	9-24	18-33	30-45	2.5-45

* All amounts for all categories are in basis points annually. Total base rates that are not the minimum or maximum rate will vary between these rates. Total base assessment rates do not include the depository institution debt adjustment.

Beginning in 2007, each institution is assigned a risk-based rate for a quarterly assessment period near the end of the quarter following the assessment period. Payment is generally due on the 30th day of the last month of the quarter following the assessment period. Supervisory rating changes are effective for assessment purposes as of the examination transmittal date.

Special Assessment – On May 22, 2009, the FDIC board approved a final rule that imposed a 5 basis point special assessment as of June 30, 2009. The special assessment was levied on each insured depository institution's assets minus its Tier 1 capital as reported in its report of condition as of June 30, 2009. The special assessment was collected September 30, 2009, at the same time that the risk-based assessment for the second quarter of 2009 was collected. The special assessment for any institution was capped at 10 basis points of the institution's assessment base for the second quarter of 2009 risk-based assessment.

Prepaid Deposit Insurance Assessments – In November 2009, the FDIC Board of Directors adopted a final rule requiring insured depository institutions (except those that are exempted) to prepay their quarterly risk-based deposit insurance assessments for the fourth quarter of 2009, and for all of 2010, 2011, and 2012, on December 30, 2009. For regulatory capital purposes, an institution may assign a zero-percent risk weight to the amount of its prepaid deposit assessment asset. As required by the FDIC's regulation establishing the prepaid deposit insurance assessment program, this program ended with the final application of

prepaid assessments to the quarterly deposit insurance assessments payable March 29, 2013. The FDIC issued refunds of any unused prepaid deposit insurance assessments on June 28, 2013.

[Note: Effective January 1, 2014, a small number of "advanced approach institutions" began reporting Tier 1 capital based on regulatory capital standards approved by the banking agencies in July 2013. For all other FDIC-insured institutions, prior existing reporting will continue until January 2015 when mandatory compliance for all institutions is scheduled to begin. <http://www.fdic.gov/regulations/capital/>. At that time a revised assessment rate schedule will be used to reflect the changes in the regulatory capital rules. <http://www.fdic.gov/news/news/financial/2014/fil14037.html>]

Risk-weighted assets – assets adjusted for risk-based capital definitions which include on-balance-sheet as well as off-balance-sheet items multiplied by risk-weights that range from zero to 200 percent. A conversion factor is used to assign a balance sheet equivalent amount for selected off-balance-sheet accounts.

Securities – excludes securities held in trading accounts. Banks' securities portfolios consist of securities designated as "held-to-maturity," which are reported at amortized cost (book value), and securities designated as "available-for-sale," reported at fair (market) value.

Securities gains (losses) – realized gains (losses) on held-to-maturity and available-for-sale securities, before adjustments for income taxes. *Thrift Financial Report* (TFR) filers also include gains (losses) on the sales of assets held for sale. (TFR filers began filing Call Reports effective with the quarter ending March 31, 2012.)

Seller's interest in institution's own securitizations – the reporting bank's ownership interest in loans and other assets that have been securitized, except an interest that is a form of recourse or other seller-provided credit enhancement. Seller's interests differ from the securities issued to investors by the securitization structure. The principal amount of a seller's interest is generally equal to the total principal amount of the pool of assets included in the securitization structure less the principal amount of those assets attributable to investors, i.e., in the form of securities issued to investors.

Small Business Lending Fund – The Small Business Lending Fund (SBLF) was enacted into law in September 2010 as part of the Small Business Jobs Act of 2010 to encourage lending to small businesses by providing capital to qualified community institutions with assets of less than \$10 billion. The SBLF Program is administered by the U.S. Treasury Department (<http://www.treasury.gov/resource-center/sb-programs/Pages/Small-Business-Lending-Fund.aspx>).

Under the SBLF Program, the Treasury Department purchased noncumulative perpetual preferred stock from qualifying depository institutions and holding companies (other than Subchapter S and mutual institutions). When this stock has been issued by a depository institution, it is reported as "Perpetual preferred stock and related surplus." For regulatory capital purposes, this noncumulative perpetual preferred stock qualifies as a component of Tier 1 capital. Qualifying Subchapter S corporations and mutual institutions issue unsecured subordinated debentures to the Treasury Department through the SBLF. Depository institutions that issued these debentures report them as "Subordinated notes

and debentures.” For regulatory capital purposes, the debentures are eligible for inclusion in an institution’s Tier 2 capital in accordance with their primary federal regulator’s capital standards. To participate in the SBLF Program, an institution with outstanding securities issued to the Treasury Department under the Capital Purchase Program (CPP) was required to refinance or repay in full the CPP securities at the time of the SBLF funding. Any outstanding warrants that an institution issued to the Treasury Department under the CPP remain outstanding after the refinancing of the CPP stock through the SBLF Program unless the institution chooses to repurchase them.

Subchapter S corporation – a Subchapter S corporation is treated as a pass-through entity, similar to a partnership, for federal income tax purposes. It is generally not subject to any federal income taxes at the corporate level. This can have the effect of reducing institutions’ reported taxes and increasing their after-tax earnings.

Trust assets – market value, or other reasonably available value of fiduciary and related assets, to include marketable securities, and other financial and physical assets. Common physical assets held in fiduciary accounts include real estate, equipment, collectibles, and household goods. Such fiduciary assets are not included in the assets of the financial institution.

Unearned income & contra accounts – unearned income for *Call Report* filers only.

Unused loan commitments – includes credit card lines, home equity lines, commitments to make loans for construction, loans secured by commercial real estate, and unused commitments to originate or purchase loans. (Excluded are commitments after June 2003 for originated mortgage loans held for sale, which are accounted for as derivatives on the balance sheet.)

Yield on earning assets – total interest, dividend, and fee income earned on loans and investments as a percentage of average earning assets.
